

Ideation Phase

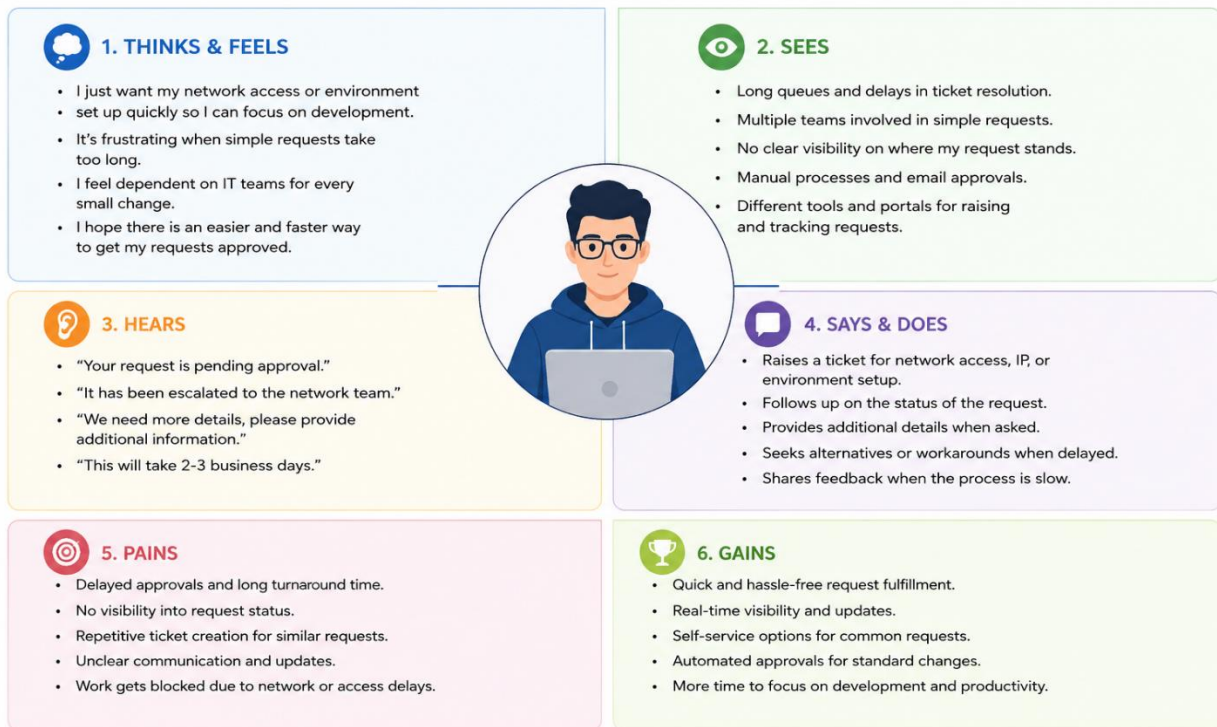

Empathize & Discover

Date	29-06-2026
Project Name	Automated Network Request Management
Team ID	
Maximum Marks	

Empathy Map:

EMPATHY MAP – Network Request Management System

Persona: End User (Frontend Developer)

Persona 1: The End-User (e.g., Frontend Developer)

Profile:

- Works as a Frontend Developer in an IT organization
- Regularly interacts with network, access, and infrastructure request systems
- Depends on fast resolution of service requests to continue development work

Goals:

- Quickly get required network access, IP configurations, or service changes approved
- Avoid delays caused by manual ticket processing
- Maintain smooth workflow without interruptions

Responsibilities:

- Develop and maintain user interfaces and web applications
- Raise service requests for development/testing environments
- Coordinate with IT operations for required configurations

Pain Points:

- Slow approval and execution of network-related requests
- Lack of visibility on request status
- Repetitive ticket raising for similar needs
- Dependency on multiple teams for simple configuration changes

Needs:

- Fast and automated request fulfillment
- Transparent tracking of ticket status

- Self-service portal for common network needs
- Clear communication from IT operations team

Expectations from System:

- Easy-to-use interface for raising requests
- Automated approvals for standard changes
- Real-time updates on request progress
- Reduced waiting time for infrastructure support

Persona 2: The Fulfiller

(e.g., Network Administrator)

Profile

- Works as a Network Administrator / IT Fulfiller in the organization
- Responsible for handling network-related service requests and changes
- Ensures smooth functioning of network infrastructure

Goals

- Execute network requests quickly and accurately
- Reduce manual workload through automation
- Maintain system stability while implementing changes
- Ensure proper documentation of all changes

Goals

- Execute network requests quickly and accurately
- Reduce manual workload through automation
- Maintain system stability while implementing changes
- Ensure proper documentation of all changes

Responsibilities

- Approve or implement network configuration changes (IP, firewall, routing, etc.)
- Monitor and manage incoming service tickets
- Coordinate with security and operations teams
- Maintain audit logs and change records

Pain Points

- High volume of repetitive and low-value requests
- Manual approval and execution process increases workload
- Lack of centralized automation for standard changes
- Difficulty tracking request history across multiple tools

Needs

- **Automated request fulfillment system for standard changes**
- **Clear and structured ticket categorization**
- **Centralized dashboard for tracking and managing requests**

- Pre-approved templates for common network operations

Needs

- Automated request fulfillment system for standard changes
- Clear and structured ticket categorization
- Centralized dashboard for tracking and managing requests
- Pre-approved templates for common network operations

Expectations from System

- Automatic routing of standard requests
- Reduced manual intervention for routine tasks
- Proper workflow automation with approvals built-in
- Easy audit trail generation for compliance

Pain & Gain Analysis

Category	Details
End-User Pain (Frontend Developer)	Delays in getting network access and environment setup, frequent dependency on IT teams, lack of visibility on request status, repetitive ticket creation for similar tasks

End-User Gain (Frontend Developer)	Faster request fulfillment, self-service access for common needs, real-time tracking of requests, reduced downtime and improved productivity
