Journey Map: Network Access Request

The Network Access Request journey starts when a user identifies the need for access to a system or network resource. The user submits a request through a service portal with required details and justification. The request is reviewed and approved by the concerned manager or authority. Once approved, the technical team configures and provides the required access. Finally, the user is notified and can start using the access, with support available if any issues occur.

Journey Phase	User Actions & Goals	Experience & Opportunities
1. Awareness	User identifies need for network access to perform tasks	Make request need clear with alerts, guides, and self-help info
2. Request Submission	Fills and submits access request form in portal	Simplify form, auto-fill details, reduce manual input

3Approval	Request sent to manager for validation and approval	Faster approvals, notifications, and escalation reminders
4. Fulfillment	IT/network team grants required access permissions	Automate access provisioning and reduce processing time

5. Notification	User gets confirmation of approved access	Real-time updates via email/SMS/portal alerts
