Problem - Solution Fit Canvas

1. CUSTOMER SEGMENTS

- End users (employees) who need network services such as VPN access, firewall rules, or system connectivity to perform tasks.
- IT network support teams who process, validate, and fulfill access requests efficiently.

2. JOBS-TO-BE-DONE / PROBLEMS

- Submit network access requests without needing technical knowledge.
- Obtain quick approvals for restricted or sensitive access.
- Monitor request progress in real time without manual follow-ups.

3. TRIGGERS

- Employee joins a new project and requires access to restricted systems.
- New employee onboarding requiring standard network/VPN setup.
- Urgent work deadlines where access is needed immediately to avoid delays.

4. EMOTIONS (BEFORE / AFTER)

- Before: Frustrated, stuck, and worried about delays in work completion.
- After: Confident, satisfied, and productive due to smooth access provisioning.

5. AVAILABLE SOLUTIONS

- Sending informal emails or messages to IT support teams.
- Visiting IT helpdesk in person for access requests.
- Using traditional ticketing systems with limited automation.

6. CUSTOMER CONSTRAINTS

- Limited technical understanding of network configurations and requirements.
- Lack of time to follow up repeatedly with managers or IT teams for approvals.

7. BEHAVIOUR

- Users often submit incomplete or incorrect request details.
- Frequent status inquiries through emails or chat platforms.
- Escalations to managers due to delays in IT response.

8. CHANNELS OF BEHAVIOUR

- Online: Email, Microsoft Teams, Slack, internal portals.
- Offline: IT desk visits, phone calls, face-to-face support requests.

9. PROBLEM ROOT CAUSE

- Manual approval workflows causing delays in processing.
- Static forms leading to confusion and incomplete data entry.
- Lack of real-time status tracking and communication.

10. PROPOSED SOLUTION

- A ServiceNow self-service portal with a dynamic Network Request catalog item.
- Automated workflow routing with multi-level approval logic.
- Real-time notifications and status updates for transparency and reduced follow-ups.
